Seasonal weather conditions:

2020 season opens with a spring characterized by some rain and, in the last days of March, snow. The latter goes along with the sprout of the gems, without damaging them. May and June distinguished by good temperatures, that helped to ensure an adequate development of the grapes. The summer is characterized by slightly high temperatures which, contrasted by a proper management of the foliage, guarantee an optimal maturation of the grapes in the month of September. Then, this balanced seasonal trend gave a concordance between phenolic maturation and technical maturation of our bunches.
